Captain's Roster Online

Welcome to Captain's Roster Online, the online app that takes your company roster and converts it into iCalendar format for you to use and share with others. To use Captain's Roster Online, you need to login to Aviaddicts (as long as you've registered first), and then provide your original roster in the standard company format. Once processed your roster is available for download directly from your browser. You can save it and then import it into any of your personal calendars or share it with family or friends.

The iCalendar format is supported on all operating systems, including Windows, Mac, Linux, and Android, and also on several online services, such as Facebook, Google Calendar, and Windows Live. If you are going to use your roster offline, you'll need an iCalendar compatible program such as Microsoft Outlook or Apple Calendar.

Captain's Roster Online saves you the time and hassle of manually entering your roster details. Of course, you should always make sure that your calendar is correct, especially across time zones or over daylight saving.

Is My Roster Supported?

Maybe 🙂. Try submitting it to Captain's Roster, and if it is not recognised you'll get an error message. If there are multiple requests to support a particular airline's rosters, I will consider adding to the code to make it so.
